## STACKING CELL FOR EMPTIES FOR BLOKSMA TRANSPORT PALLETS

In lean, modern production and manufacturing processes a needs-based and orderly handover of workpieces is essential. In order to ensure an efficient and employee-friendly interim puffering of empties (transport pallets) BLOKSMA offers a stacking cell for empties – the so-called palletizer. The palletizer ensures a needs-oriented material flow and makes the handling of empties easy and safe.

In one stacking cell up to 10 empty transport pallets can be stored.

The maximum load capacity is 900 kg.

The palletizer is operated electrically (230V) and the standard lacquered finish is RAL 7035.

**Palettizer 205555** - suited for transport pallets of 1.200 x 800 mm

**Palettizer 205884** - suited for transport pallets of 1.200 x 1.000 mm
